AMERICANA DIGITAL RESERVE / EXCHANGE

Financial & Tax Reporting Portfolio

Delaware Statutory Trust Reporting Framework

Prepared for

Caustin Lee McLaughlin Juan Jose Fernandez

Custody Statements • Quarterly Net Asset Value Reports • Tax Documentation

Portfolio version:	1.0 — Working portfolio framework
Reporting scope:	2025 tax year and 2026 reporting periods
Document status:	Design, register, and templates; underlying records not attached
Prepared date:	October 14, 2026

IMPORTANT STATUS NOTICE

This portfolio organizes the document inventory and reporting procedures described by the requester. It does not create, reproduce, certify, or authenticate a custody statement, NAV report, IRS Form 1099-B, or Schedule K-1. The listed documents have not been supplied for verification. Blank templates below are illustrative working forms only.

Confidential working document — distribute only to authorized recipients.

Portfolio Control Page

Control field	Value
Portfolio title	Financial & Tax Reporting Portfolio — Delaware Statutory Trust
Prepared for	Caustin Lee McLaughlin
Related platform context	Americana Digital Reserve / Americana Digital Exchange (ADR/ADX), as described in the supplied platform specification
Primary purpose	Organize the requested statements and tax-document inventory, define reporting controls, and provide fillable internal templates
Covered document periods	Q3 2026; August 2026; 2025 tax year
Source inventory status	The period labels, document types, and generated dates are user-provided descriptions; independent verification has not been performed
Custody status	No custodian-issued statement or underlying transaction ledger was supplied with the request
NAV status	No NAV calculation, valuation workpaper, portfolio holdings file, or reviewer sign-off was supplied
Tax status	No official Form 1099-B, Schedule K-1, transaction-level tax lot data, or tax preparer certification was supplied
Revision control	Record changes in the revision log at the end of this portfolio

Use this portfolio as a document-management and reporting-control framework. Do not present a blank or illustrative form as an issued financial record. Do not infer balances, NAV, tax basis, proceeds, income, deductions, or tax allocations from the document index alone.

Executive Summary

This portfolio brings the requested Financial & Tax Reporting document inventory into a single structured LaTeX record for Caustin Lee McLaughlin. The stated reporting environment is a Delaware Statutory Trust and the associated ADR/ADX platform context. The requested inventory includes a quarterly report for Q3 2026, a monthly report for August 2026, and a 2025 tax report identified as Form 1099-B / Schedule K-1 documentation.

The supplied platform specification describes an ADR/ADX system concept with a member portal, administrative console, API services, PostgreSQL persistence, Redis caching, messaging infrastructure, custody-service integrations, reconciliation, and audit logging. Those design elements can support a reporting workflow, but the presence of a software architecture does not establish that a custodian account exists, that assets are held, that a trust is legally formed, that a NAV has been calculated, or that any tax form has been issued.

Accordingly, this document separates (1) the document inventory supplied by the requester, (2) the proposed reporting-control framework, and (3) blank templates for authorized personnel to complete from source records. No amounts or tax results have been fabricated.

Chapter 1

Scope, Assumptions, and Limitations

1.1 Purpose

The purpose of this portfolio is to consolidate the requested financial and tax reporting items into one organized document. It is intended to function as a master index, internal control specification, and template set for collecting and reviewing actual source records.

1.2 Scope

The portfolio covers:

- monthly custody-statement intake and reconciliation;
- quarterly NAV-report preparation and review;
- tax-document intake for the 2025 tax year, including documents described as IRS Form 1099-B and Schedule K-1;
- document access, versioning, audit trails, and retention controls;
- ADR/ADX application architecture touchpoints relevant to statement generation and delivery;
- blank working templates and checklists.

1.3 Assumptions requiring confirmation

The requester identifies the organization or reporting context as a Delaware Statutory Trust. Before issuing external reports, an authorized fiduciary, administrator, accountant, or attorney should confirm the trust's exact legal name, formation status, governing instrument, EIN, tax classification, custodian relationships, applicable reporting obligations, and authority to distribute the documents.

1.4 Limitations

This portfolio is not:

- a legal opinion regarding formation or compliance of a Delaware Statutory Trust;
- an audited or reviewed financial statement;
- a certification that assets are held by any named custodian;
- an official IRS form or substitute for a tax form issued by a qualified issuer;

- a valuation opinion or an assertion of current or historical net asset value;
- evidence that any of the listed items is available for download in a live system.

Chapter 2

Generated Document Register

2.1 Register supplied for consolidation

The following register reproduces the document descriptions provided by the requester. "Generated date" is recorded as supplied and should not be treated as proof of issuance or authenticity without the actual document and its metadata.

Period	Document type	Generated date	Action / verification
Q3 2026	Quarterly report	9/30/2026	Download listed; file not provided for review
August 2026	Monthly report	8/31/2026	Download listed; file not provided for review
2025 Tax Year (Form 1099-B / K-1)	Tax report	2/14/2026	Download listed; official forms not provided for review

2.2 Document identifiers

Assign stable identifiers when the actual files are received. The following are proposed internal identifiers, not issuer-assigned IDs:

Proposed ID	Document	Minimum intake evidence
ADR-FR-2026-Q3-001	Q3 2026 quarterly report / NAV package	Original PDF or issuer export; reporting cutoff; holdings and pricing workpapers; preparer and reviewer approvals
ADR-FR-2026-08-001	August 2026 monthly custody report	Custodian-issued statement; account identifier; beginning/ending balances; transaction detail; reconciliation record
ADR-TAX-2025-001	2025 tax documentation packet	Actual Form 1099-B and/or Schedule K-1 as applicable; issuer identity; tax year; corrected-form status; supporting tax-lot records

2.3 Receipt and verification fields

For each actual file, record:

- file name and format;
- issuing institution, custodian, trustee, broker, or tax-reporting entity;
- date received and delivery channel;
- reporting period and account or entity identifier;
- document identifier, revision number, and corrected/superseded status;
- file integrity hash if the organization uses one;
- reviewer name or role, review date, exceptions, and disposition.

Chapter 3

Monthly Custody Statement Framework

3.1 Purpose and contents

A monthly custody statement should report the account and reporting period, beginning and ending positions, cash activity, asset movements, fees, transfers, income, realized transactions where applicable, and any reconciling items. Exact contents depend on the actual custodian and account type.

3.2 August 2026 intake record

Field	Entry
Period	August 1–31, 2026
Document listed as generated	August 31, 2026
Actual statement received?	_____
Issuing custodian	_____
Account title / masked identifier	_____
Beginning balance	_____
Ending balance	_____
Statement currency	_____
Transaction schedule attached?	_____
Reconciliation completed by / date	_____
Exceptions / follow-up	_____

3.3 Monthly reconciliation procedure

1. Obtain the original statement from the custodian's authenticated channel.
2. Confirm the statement period, account title, masked account identifier, and issuer.
3. Compare beginning balances to the prior period's confirmed ending balances.
4. Match deposits, withdrawals, trades, transfers, fees, income, and corporate actions to the transaction ledger.
5. Compare quantities and asset identifiers against custody records; separately document assets that are pending, pledged, restricted, or in transit.

6. Investigate differences and preserve evidence of corrections.
7. Obtain independent review and lock the reconciled version against untracked edits.

3.4 Illustrative monthly statement shell

DRAFT / TEMPLATE — NOT AN ISSUED FINANCIAL OR TAX RECORD

Statement field	Value to be populated from source records
Account holder / entity	
Custodian legal name	
Account identifier (masked)	
Statement period	August 1–31, 2026
Opening cash balance	
Closing cash balance	
Opening asset value	
Closing asset value	
Deposits / incoming transfers	
Withdrawals / outgoing transfers	
Trading activity / settlements	
Fees and expenses	
Income and distributions	
Unsettled transactions	
Reconciliation difference	
Prepared by / date	
Reviewed by / date	

This shell is not a custodian-issued statement and must not be labeled "certified." A certification statement may be added only by an authorized issuer or reviewer with a valid basis for making that certification.

Chapter 4

Quarterly Net Asset Value Reporting Framework

4.1 Q3 2026 reporting period

The requested register identifies a quarterly report generated on September 30, 2026. The reporting period and valuation cutoff should be confirmed against the original report. For a conventional calendar-quarter report, the period would generally be July 1 through September 30, 2026; this portfolio does not assert that the supplied item follows that convention.

4.2 NAV concepts

Where applicable to the trust's governing documents and accounting policies, a simplified NAV calculation may be represented as:

$$\text{NAV} = \sum_{i=1}^{n} V_i + C + R - L - E,$$

where V_i represents the approved valuation of each portfolio asset, C cash and cash equivalents, R receivables and other recognized assets, L liabilities, and E accrued expenses or other deductions not already included in liabilities. The precise accounting policy, asset classification, and treatment of fees must be established by the responsible professional. This equation is explanatory, not a calculation of any actual NAV.

If a per-unit or per-interest NAV is required, a separate denominator must be supported by the trust's official unit or beneficial-interest records:

$$\text{NAV per unit} = \frac{\text{NAV}}{\text{eligible units outstanding}}.$$

Do not use token balances or software display totals as the denominator unless the governing documents and accounting records establish that treatment.

4.3 Q3 NAV workpaper shell

DRAFT / TEMPLATE — NOT AN ISSUED FINANCIAL OR TAX RECORD

Line item	Amount / support reference

Cash and cash equivalents	_____
Listed securities / quoted assets	_____
Digital assets, if held and recognized	_____
Other investments and receivables	_____
Total recognized assets	_____
Liabilities payable	_____
Accrued fees and expenses	_____
Other recognized liabilities	_____
Total liabilities and deductions	_____
Net asset value	_____
Eligible units / interests outstanding	_____
NAV per unit / interest, if applicable	_____
Valuation cutoff date and time zone	_____
Pricing sources and exceptions attached?	_____
Prepared by / date	_____
Reviewed and approved by / date	_____

4.4 Valuation governance checklist

- Written valuation policy approved by the appropriate governing body.
- Source hierarchy defined for each asset class.
- Pricing cutoff and time zone documented.
- Stale, unavailable, or materially divergent prices escalated.
- Foreign exchange rates and conversion timestamps recorded where needed.
- Illiquid or privately valued positions supported by approved methods and workpapers.
- Liabilities, accrued fees, and pending settlements included consistently.
- Independent review and exception sign-off completed.
- Final report reconciled to custody statements and general ledger.

Chapter 5

2025 Tax Documentation Framework

5.1 Tax-document register

The supplied index labels the 2025 tax-year item "Form 1099-B / K-1" and lists a generated date of February 14, 2026. That label alone does not establish that both forms were issued, that either form is applicable, or that the packet is complete. Obtain the original forms and determine which reporting entity issued each form and to whom it applies.

Tax intake field	Record
Tax year	2025
Date listed as generated	February 14, 2026
Actual Form 1099-B received?	
Actual Schedule K-1 received?	
Issuer / broker / partnership / trust	
Recipient name and tax identifier verified?	
Corrected form or amended package?	
Transaction statement / tax-lot detail attached?	
Tax preparer review completed?	
Open questions / discrepancies	

5.2 Form 1099-B support file

Where a Form 1099-B is actually issued, retain the form and the supporting records relevant to the reported transactions. Depending on the account and transaction type, these may include:

- proceeds and transaction dates;
- acquisition dates and cost-basis information, where reported or available;
- adjustments, wash-sale information, and covered/noncovered status where applicable;

- trade confirmations, exchange records, custody records, and transfer records;
- records explaining any difference between the issuer's reporting and the taxpayer's own records.

Do not create a substitute Form 1099-B from a portfolio summary. Use the official form provided by the reporting entity and consult a qualified tax professional about reporting treatment.

5.3 Schedule K-1 support file

A Schedule K-1 may be relevant when a pass-through entity issues one to a partner, member, or beneficiary, depending on the entity's tax classification and the recipient's status. A Delaware statutory trust's legal form alone does not determine every federal tax consequence. Confirm the actual entity classification and recipient relationship before assuming a K-1 is required.

If a Schedule K-1 is issued, retain:

- the complete issuer-provided Schedule K-1 and all attached statements;
- the issuing entity's exact legal name and EIN as shown on the form;
- supplemental schedules and footnotes;
- capital account, basis, distribution, and liability information where provided;
- any amended or corrected K-1 and the superseded version;
- written guidance from the issuer or tax preparer on unresolved items.

5.4 Tax-document reconciliation checklist

1. Verify taxpayer and issuer identity using the original document.
2. Confirm tax year, form type, issue date, and corrected-form status.
3. Compare reported proceeds and other amounts to transaction-level records.
4. Identify missing forms, duplicate forms, and unexplained differences.
5. Reconcile digital-asset records, broker records, custody activity, and trust allocations as applicable.
6. Keep source data and calculations separate from the official tax form.
7. Refer legal classification, basis, character, allocation, and filing questions to a qualified tax professional.
8. Preserve the final reviewed tax packet and a record of the version used for filing.

5.5 Tax review worksheet

DRAFT / TEMPLATE — NOT AN ISSUED FINANCIAL OR TAX RECORD

Review item	Notes / source reference
Issuer identity verified	_____
Taxpayer / recipient identity verified	_____

Form type and tax year confirmed	_____
Original vs. corrected version confirmed	_____
Proceeds reconciled to transaction records	_____
Basis information reviewed	_____
K-1 supplemental statements reviewed, if applicable	_____
Trust allocations reconciled, if applicable	_____
Unresolved tax questions referred to professional	_____
Reviewer / date	_____

Chapter 6

ADR/ADX Reporting-System Context

6.1 Source-described architecture

The supplied ADR/ADX platform specification describes a conceptual system with a member portal, admin console, optional mobile PWA, NGINX reverse proxy, Node.js API gateway, authentication and trading services, custody and reconciliation services, PostgreSQL, Redis, RabbitMQ, external custody adapters, and transaction-monitoring integration. It also describes a statements area in the member dashboard and backend routes for member, custody, trading, conversion, administration, and webhooks.

These components are treated here as design context from the supplied platform document, not as independent evidence of a deployed or operational system.

6.2 Reporting data flow

A controlled reporting pipeline should follow a traceable flow:

```
Source custodian / broker / issuer records
                    |
                    v
Authenticated intake + document identity checks
                    |
                    v
Transaction ledger + position reconciliation
                    |
                    v
Valuation workpapers + accounting / tax mapping
                    |
                    v
Independent review + exception resolution
                    |
                    v
Approved statement / NAV package / tax-document index
                    |
                    v
Access-controlled member delivery + immutable audit event
```

6.3 Suggested service boundaries

Service or component	Reporting responsibility
Member portal	Authenticated access to statements and tax-document index; clear labels for draft, final, corrected, or superseded documents
Custody service adapter	Retrieve or ingest custodian data through authorized, documented integrations; retain source identifiers
Reconciliation service	Match ledger events, balances, transfers, and positions; produce exception queues rather than silently adjusting records
Valuation service	Store valuation source, timestamp, method, price, and override approval for each material position
Tax-document service	Index issuer-provided tax forms and supporting records; never fabricate an official form
Audit service	Log creation, approval, replacement, download, and permission changes
Notification service	Notify authorized users of availability or corrected documents without exposing sensitive values in email subject lines
Administration console	Enforce least privilege and dual approval for sensitive actions

6.4 Minimum document metadata

Each document record should include, at minimum:

- internal document ID and document type;
- period start/end and applicable tax year;
- issuer and source-system identifier;
- received/generated timestamp with time zone;
- status: received, in review, approved, issued, corrected, superseded, or withdrawn;
- cryptographic digest, if used, and the digest algorithm;
- reviewer and approval record;
- storage location and access policy;
- correction relationship to any prior version.

Chapter 7

Security, Privacy, and Access Controls

7.1 Access model

Financial and tax records should be exposed only to authenticated and authorized recipients. Apply least privilege by role and by document. Administrative access should be limited, monitored, and subject to strong authentication. A user interface displaying a "Download" action must confirm that the requested document exists, is approved for release, and belongs to the authenticated account or entity.

7.2 Recommended controls

- Multi-factor authentication for privileged and member access.
- Encryption in transit and at rest, with key management separated from application data.
- Short-lived access tokens, secure refresh-token rotation, session revocation, and appropriate cookie/storage design.
- Server-side authorization for every document request; do not rely on front-end visibility or hidden links.
- Malware scanning and file-type validation for uploaded statements and tax forms.
- Tamper-evident audit records for viewing, downloading, approving, correcting, and deleting documents.
- Redaction of tax identifiers and account numbers in logs and support tickets.
- Tested backup, recovery, retention, and secure-deletion procedures.
- Independent security review before handling actual customer assets or sensitive tax records.

7.3 Download authorization sequence

1. Authenticate the session and validate any step-up authentication requirement.
2. Resolve the document by an opaque identifier rather than a user-controlled filesystem path.
3. Verify user, entity, account, and document-level permissions on the server.
4. Confirm the document is approved and not superseded or withdrawn.
5. Record the access event without logging document contents or unmasked identifiers.

6. Stream the file using safe response headers and an appropriate content type.

7.4 Correction and supersession

A corrected statement or tax form must not silently overwrite the prior record. Retain the prior version in restricted storage where required, mark it superseded, link the new version to it, record the reason and authorizing party, and notify affected recipients through an approved process. The applicable legal retention rules and issuer requirements should be confirmed before disposal.

Chapter 8

Operating Procedures and Responsibility Matrix

8.1 Proposed monthly close

1. Intake source statements and transaction exports.
2. Reconcile cash, positions, transfers, fees, and unsettled activity.
3. Resolve or formally carry forward exceptions with an owner and due date.
4. Generate a draft report from the approved ledger snapshot.
5. Conduct a second-person review.
6. Approve and publish the final statement.
7. Archive the exact issued file and its metadata.

8.2 Proposed quarterly close

1. Complete the monthly reconciliation for the quarter-end date.
2. Freeze the valuation snapshot and record cutoff timestamps.
3. Apply the approved valuation policy and document overrides.
4. Reconcile asset and liability totals to accounting records.
5. Calculate NAV and, if applicable, NAV per eligible interest using approved records.
6. Prepare supporting workpapers and exception summaries.
7. Obtain authorized approval before distribution.

8.3 Responsibility matrix

Activity	Preparer	Reviewer	Approver / owner
Monthly statement reconciliation	Assigned operations role	Independent reviewer	Authorized fiduciary / finance owner

Quarterly NAV workpaper	Finance / valuation role	Independent accounting reviewer	Authorized governing role
Tax-document intake	Tax operations role	Tax reviewer	Tax owner / recipient as appropriate
Document release	Reporting administrator	Access-control reviewer	Authorized release owner
Correction / reissue	Document owner	Independent reviewer	Authorized approver
Security incident response	Security operations	Compliance / privacy role	Incident commander / accountable owner

8.4 Exception register template

ID	Date opened	Description	Owner / due date	Disposition / evidence
EX-001	_____	_____	_____	_____
EX-002	_____	_____	_____	_____
EX-003	_____	_____	_____	_____

Chapter 9

Document Production and Release Checklist

Before a report is released, confirm each applicable item:

☐ The source record came from an authenticated, authorized channel.

☐ The reporting period and cutoff are correct.

☐ The legal entity, account, and recipient are correct.

☐ All required schedules and attachments are present.

☐ Reconciliations are complete or exceptions are clearly disclosed.

☐ Valuation methods and source timestamps are documented for NAV reporting.

☐ Official tax forms are issuer-provided and have not been recreated from a summary.

☐ Corrected and superseded versions are identified.

☐ Reviewer and approver sign-offs are recorded.

☐ Download permissions have been tested with an authorized account.

☐ The released artifact and metadata are archived.

Chapter 10

Portfolio Exhibits

10.1 Exhibit A — Source document inventory

Exhibit	Description	Period	Listed date	Actual file
A-1	Quarterly report	Q3 2026	9/30/2026	Not supplied
A-2	Monthly report	August 2026	8/31/2026	Not supplied
A-3	Tax report: Form 1099-B / K-1	2025 tax year	2/14/2026	Not supplied

10.2 Exhibit B — Monthly custody review record

Reporting entity _____

Custodian and masked account identifier _____

Statement period _____

Beginning balance tie-out _____

Ending balance tie-out _____

Transaction exceptions _____

Reviewer and date _____

Final disposition _____

10.3 Exhibit C — Quarterly NAV approval record

Reporting cutoff and time zone _____

Approved valuation policy version _____

Holdings snapshot reference _____

Pricing sources and timestamps _____

Total assets _____

Total liabilities and expenses _____

NAV and denominator support, if applicable _____

Approver and date _____

10.4 Exhibit D — Tax packet completeness record

Tax year and recipient verified _____

Corrected-form status _____

Tax preparer questions and resolutions _____

Final packet location and version _____

10.5 Exhibit E — File integrity and custody log

Record ID	File name	Received date	Custodian / source	Hash / review notes

Glossary

Custody statement	A statement issued by a custodian or financial institution showing account positions and activity for a defined period.
NAV	Net asset value, generally determined by applying the relevant accounting and valuation policies to recognized assets and liabilities.
Form 1099-B	An information return used by a reporting entity to report certain proceeds from broker and barter exchange transactions.
Schedule K-1	A tax schedule used by certain pass-through entities to report a recipient's share of specified tax items.
Source record	The original third-party or system-of-record evidence used to prepare a report.
Superseded document	A prior version that has been replaced by a later approved version but may need to be retained for audit and history.
Reconciliation	A documented comparison of independent records to identify and resolve differences.

Chapter 12

Revision Log and Sign-Off

12.1 Revision log

Version	Date	Change summary	Prepared by
1.0	October 14, 2026	Initial consolidation of the supplied reporting index into a structured portfolio and blank control templates. No underlying financial or tax records were supplied.	Portfolio draft

12.2 Approval record

The signatures below are intentionally blank. Completion should occur only after review by persons authorized to approve the relevant financial or tax records.

Prepared by / role / date _____

Independent reviewer / role / date _____

Authorized approver / role / date _____

Final document version and archive location _____

Final Notice

This portfolio is a structured reporting framework assembled from the period, document-type, and date descriptions provided by the requester and from the supplied ADR/ADX platform specification. It is not proof that any listed document was issued, is authentic, or contains any particular balance or tax item. The underlying statements, valuation workpapers, and official tax forms must be obtained from their actual issuers and reviewed by qualified professionals before reliance or distribution.

Prepared for: Caustin Lee McLaughlin
Portfolio status: Working draft / reporting framework
