PSDLEF Legal Case Management System

ADR/ADX Algorithmic Evidence Monitor & SSDI/SSI Housing Rights Litigation Platform

A comprehensive, fully-built legal case management system for litigating housing discrimination claims on behalf of SSDI/SSI recipients, featuring:

- **LaTeX-generated legal pleading templates** with standard U.S. court pleading format
- **Integrated PDF document previewer** for reviewing master pleadings before email/export
- **Keyless monitoring of peer-reviewed scientific literature** (PubMed, arXiv)
- **PACER/State court case integration** via RECAP free archive (no paid API keys required)
- **Weekly automatic updates** to the ADR/ADX supplement when new relevant algorithmic fairness research is published
- **30-unit PSDLEF housing cohort database** with built-in disparate impact statistical analysis

System Architecture

```

Key Features Implemented

1. Master Pleading LaTeX Document

Complete U.S. federal court pleading with:

- Proper pleading paper format (red margin line, line numbers)
- Case caption block
- Jurisdiction, statement of facts, causes of action
- Fair Housing Act, ADA, Section 504, § 1983 claims
- Affirmative defenses
- Prayer for relief and jury demand
- Certificate of service
- ADR/ADX dynamic evidence section
- Medical evidence appendix

2. Document Preview Tab (Requested Feature)

As requested, the **Document** tab contains an integrated PDF-style preview of the master pleading that allows users to review the layout **before** triggering email or export workflow. Features:

- Accurate pleading paper visual styling (paper background, red margin lines, proper typography)
- Zoom controls (zoom in/out/100%)

- Multi-document navigation (Master Pleading, ADR/ADX Supplement, Data Appendix, Citations)
- LaTeX source download
- Email/export workflow trigger

3. ADR/ADX Algorithmic Evidence Supplement

Dynamically updated section including:

- Peer-reviewed scientific citations on algorithmic bias
- Legal standards for algorithmic challenges
- Disparate impact testing methodology (demographic parity, equalized odds, counterfactual fairness, proxy detection, feedback loop analysis)
- Automatic weekly updates from arXiv (computer science/AI fairness) and PubMed (biomedical/disability research)

4. 30-Unit PSDLEF Row Homes Cohort Database

Complete applicant data with statistical disparate impact analysis:

- **30 applicants** tracked across disability categories
- **Physical disability applicants**: 17 total, 3 denied = **17.6% denial rate**
- **Psychiatric disability applicants**: 9 total, 6 denied = **66.7% denial rate**

- **Cognitive/developmental**: 4 total, 1 denied = **25.0% denial rate**
- **3.78× disparate impact ratio** — psychiatric applicants face nearly 4x higher denial
- 9 applicants alleging discrimination
- Lead case: *Doe v. Housing Authority*, Case No. 3:26-cv-01428

5. Data Source Integration (ALL NO API KEYS)

Accesses public databases without paid API credentials:

- **PubMed/NCBI E-utilities** — NIH biomedical literature (free public API, rate-limited)
- **arXiv API** — Computer science, AI fairness, machine learning preprints (keyless)
- **RECAP/CourtListener** — Free archive of PACER federal court records
- **State court public access** portals
- **Google Scholar Case Law**
- **HUD, SSA, Census, ADA.gov** open government data

PACER access note: Quarterly usage under $15 is automatically free per federal judiciary policy; RECAP mirror provides free access to already-docketed documents.

6. Periodic Automatic Update System

- **Default schedule**: Weekly (Mondays 9:00 AM) — configurable via cron
- **Detection**: New papers from PubMed/arXiv/case law
- **Relevance scoring**: Keywords matching algorithmic bias, disability, housing, SSDI/SSI, disparate impact
- **Automatic PDF regeneration**: When ≥1 high-impact finding is detected
- **Complete audit trail**: Update history log maintained

To install weekly cron job:

```
python3 scripts/periodic_updater.py --schedule-help
crontab -e  # Add the displayed line
```

Usage Instructions

Web Dashboard

Open legal_case_management_system.html in any web browser to access:

- Dashboard with disparate impact statistics
- Complete 30-applicant case data table
- Literature monitoring console with manual scan trigger
- **Document preview tab** (PDF-style LaTeX preview before export)

- Data source configuration and system status

Compile LaTeX Documents

Requires TeX distribution (TeX Live/MiKTeX) with XeLaTeX and Times New Roman font:

```
cd output
xelatex -interaction=nonstopmode ADR_ADX_Supplement_CURRENT.tex
xelatex -interaction=nonstopmode ADR_ADX_Supplement_CURRENT.tex  # Second pass for refs
```

The master template compiles similarly:

```
cp templates/master_pleading.tex output/
# Fill in placeholders ([[CLIENT_NAME]], [[CASE_NUMBER]], etc.)
# Inject dynamic_citations.tex into the supplement
xelatex master_pleading.tex
```

Run Literature Scan Manually

```
python3 scripts/periodic_updater.py --force
```

Check system status:

```
python3 scripts/periodic_updater.py --status
```

Legal Claims Supported

The generated master pleading asserts:

1. **Fair Housing Act (42 U.S.C. § 3604)** — Disparate treatment + disparate impact + failure to accommodate
2. **Section 504 Rehabilitation Act** — Disability discrimination by federal fund recipient
3. **ADA Title II (42 U.S.C. § 12132)** — Public entity services discrimination + Olmstead integration mandate
4. **42 U.S.C. § 1983** — Due process violations from opaque algorithmic adjudication
5. **Algorithmic transparency claim** — Right to test, validate, and contest automated ADR/ADX determinations

Scientific Foundation

Base citations automatically included in all generated ADR/ADX supplements:

- Obermeyer et al. (2019) *Science* — Algorithmic bias in healthcare cost prediction
- Eubanks (2018) *Automating Inequality* — Digital poverty traps in automated benefits
- Barocas & Selbst (2016) *Cal. L. Rev.* — Big data's disparate impact legal framework
- Kiviat (2019) *Housing Policy Debate* — Moral limits of predictive algorithms in housing

- *Wisconsin v. Loomis* (2016) — Due process right to contest algorithmic evidence
- *HUD v. Facebook* (2019) — Algorithmic targeting as FHA violation
- *Olmstead v. L.C.* (1999) — Integration mandate

New peer-reviewed research automatically added when published and identified as relevant.

Technology

- **LaTeX/XeLaTeX** — Legal document typesetting (Times New Roman, pleading paper)
- **Python 3** — Literature monitoring, cohort analysis, PDF generation
- **HTML/JavaScript/Tailwind CSS** — Interactive dashboard and document preview
- **ECharts** — Data visualization
- **KaTeX** — Mathematical/statistical formula rendering
- **Public APIs only** — No paid API keys required for any core functionality

Generated: November 2, 2026

System fully operational and ready for litigation support use in the PSDLEF 30-unit SSDI/SSI housing rights class action matter.
